

Part 2 Transmission

Physical layer
Bandwidth, bit rate
Channel coding
Modems
Multiplexing

Physical layer

- Functions
 - channel coding: encode a series of bits into signals
 - modulation: adapt signal to the transmission channel
 - multiplexing: share the channel

93

Bit rate

- Information to transmit: series of bits 0 et 1
 - bit period: T
- Bit rate
 - number of bits per time unit [b/s]

$$D = 1/T$$

94

Coded signal

- Series of symbols represented by a signaling element (amplitude, frequency, phase)
 - V symbols a_i
 - V : number of symbols per signaling element (*valence du signal*)
 - T : symbol duration (*intervalle significatif*)

95

Signaling rate vs. bit rate

- Signaling or modulation rate (*rapidité de modulation*)
 - number of symbols per time unit [bauds] (Émile Baudot); maximum rate at which the encoded signal changes levels

$$R_m = 1/T$$

$$D = R_m \log_2 V$$

$$D = R_m \log_2 V$$

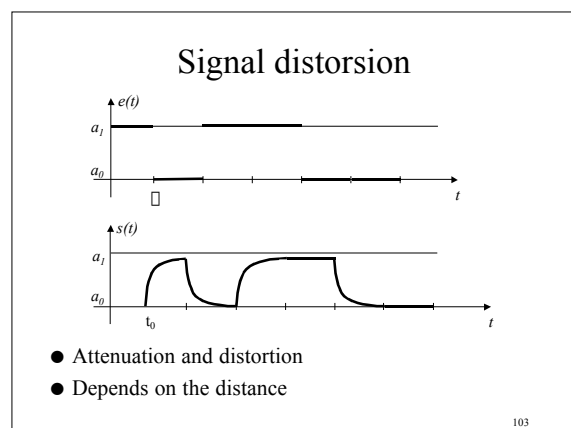

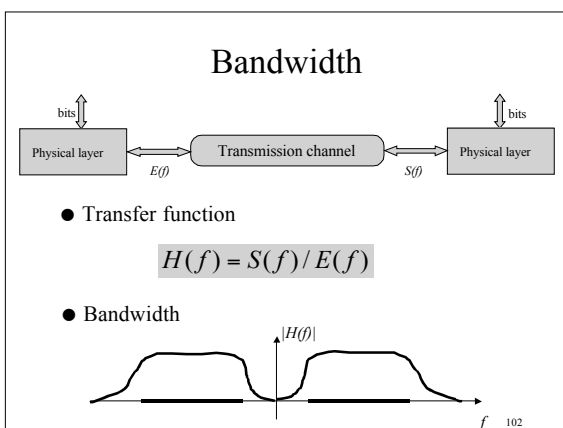

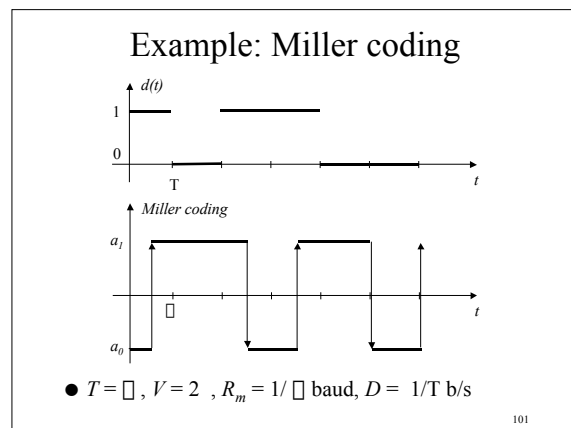

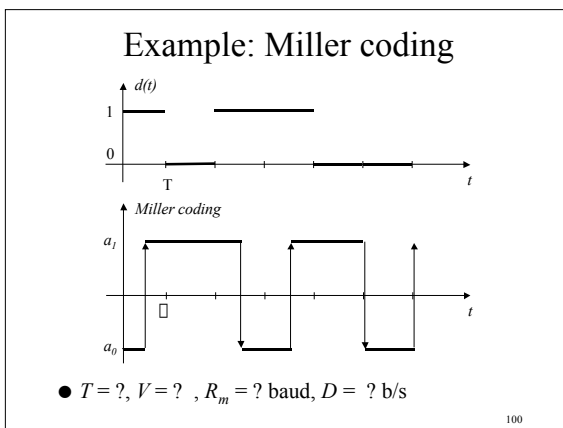

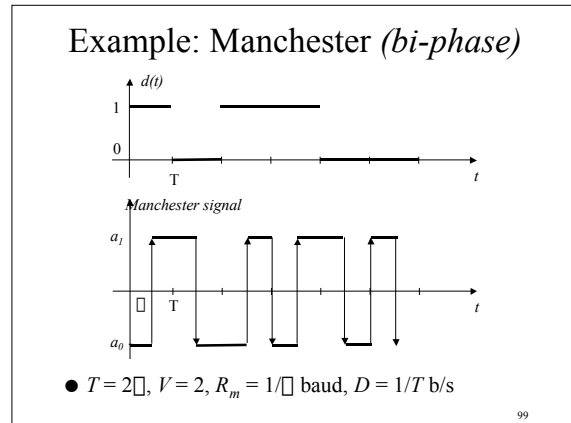

96

Example: two-level signal

- $T = T$, $V = 2$, $R_m = 1/T$ baud, $D = 1/T$ b/s

97

Bit rate limitation

- Nyquist
 - bandwidth B , noiseless channel

$$R_m \leq 2B$$

$$D \leq 2B \log_2 V$$

- example : $V = 2$, $B = 3000$ Hz, $D_{\max} = 6$ Kb/s

104

Bit rate limitation

- Shannon
 - bandwidth B
 - noise :
 - » signal to noise ratio

$$(S/N)_{dB} = 10 \log_{10}(P_S / P_N)$$

- » limitation

$$D \leq B \log_2(1 + P_S / P_N)$$

105

Bit rate limitation

- Example :
 - $S/N = 30$ dB, $P_s/P_n = 1000$
 - $B = 3100$ Hz
 - $D_{\max} = 30\,894$ b/s
 - $S/N = 38$ dB, $P_s/P_n = 6309$
 - $B = 3100$ Hz
 - $D_{\max} = 39\,600$ b/s
- Conclusion
 - a noisy channel of a given bandwidth has limited bit rate

106

Transmission media

- Twisted pair
 - unshielded
 - » UTP-3 (*Unshielded Twisted Pair*) phone quality
 - » UTP-5 data quality
 - shielded
 - » STP (*Shielded Twisted Pair*)

107

Transmission media

- Twisted pair
 - UTP -3 of 100m
 - » bandwidth: 16 MHz
 - UTP -5 of 100m
 - » bandwidth: 100 MHz
 - error rate: 10^{-5}

108

Transmission media

- Coaxial cable
 - 50 Ω , 75 Ω (TV)
 - bandwidth: several hundreds MHz
 - several hundreds Mb/s on 100 m
 - error rate: 10^{-8} , 10^{-9}

109

Transmission media

- Fiber
 - multimode stepped index (50-125 μ m)
 - » 40 MHz sur 1 km
 - multimode graded index (50-125 μ m)
 - » 500 MHz sur 1 km
 - monomode (2-8 μ m)
 - » 100 GHz sur 1 km

Transmission media

- Fiber
 - Erbium-Doped Fiber Amplifiers - Tb/s
 - limit: 1 Gb/s - electric/optical junction
 - low error rate (no electro-magnetic interference): 10^{-10}

Transmission media

- Radio waves
 - length ($\lambda = c/f$) :
 - » 1 MHz - 300 m
 - » 30 GHz - 1 cm
 - propagation
 - » > 100 Mhz straight line
 - » < 5 GHz traverses concrete (2.4 GHz WaveLAN)
 - » ~ 8 GHz absorbed by water
 - GSM :
 - » 124 channels of 200 KHz around 900 MHz

Transmission media

- Satellites
 - geo-stationary - 36 000 km
 - » between 3 and 30 GHz
 - » 12-20 channels of 36-50 MHz (50 Mbit/s)
 - LEO (*Low Earth Orbit*) - 750 km
 - » 1.6 GHz
 - » 77 satellites that cover all the surface
 - broadcast medium

Electromagnetic spectrum

Typical bit rates

- Twisted pair
 - 200 Mb/s on short distances
- Coaxial cable
 - 1 Gb/s on 1 km
- Radio wave
 - 11 Mb/s
- Satellite
 - 4-6 Gb/s
- Fiber
 - 10-100 Gb/s

Baseband transmission

- Coding
 - no frequency transposition
 - no modulation

116

Channel coding

- NRZ (*Non Return to Zero*)

- NRZI (*Non Return to Zero Inverted*)

117

Channel coding

- Manchester
 - at least one transition
 - used in Ethernet

118

Broadband transmission

- Modulation
 - frequency transposition
 - adapt signal to the channel

119

Modulation

120

Modulation

121

Types of modulation

- Carrier signal

$$s(t) = A \cos(2\pi ft + \phi)$$

- Modulation

- amplitude (*ASK - Amplitude Shift Keying*) : $A(t)$
- frequency (*FSK - Frequency Shift Keying*) : $f(t)$
- phase (*PSK - Phase Shift Keying*) : $\phi(t)$

122

Amplitude modulation

123

Frequency modulation

124

Phase modulation

125

Phase and amplitude modulation

126

Phase and amplitude modulation

- *QAM - Quadrature Amplitude Modulation*
- V.32
 - $D = 9600$ b/s
 - $R_m = 2400$ baud
 - $V = 16$
 - one point corresponds to 4 bits
- V.34
 - 33.6 Kb/s

127

What type of modulation?

128

Phase modulation

129

Asynchronous transmission

- One character at a time; beginning and end markers

130

Asynchronous transmission

- Start Bit
- character: 7, 7 + parity, 8
- Stop Bit (1, 2 ou 1.5)
- overhead

131

Synchronous transmission

- Clock ticks with information signal
- Two channels

132

Synchronous transmission

- One channel

- Recover clock from the information signal
– Manchester

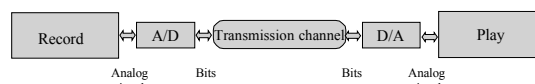

133

Transmission errors

- Signal distortion, noise, synchronisation errors □ transmission errors
- Media of a given length
 - bandwidth B
 - signal to noise ratio S/N□ error rate
- Longer media, higher error rate
- More noise, higher error rate

PCM - Pulse Coded Modulation MIC - Modulation par Impulsion Codés

- PCM - Pulse Coded Modulation
 - digital sound
 - A/D Analog/Digital

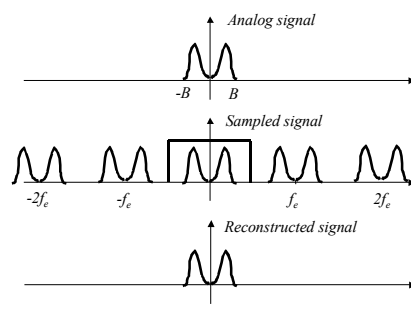

Sampling

- Sampling frequency
 - B - maximal frequency of the signal
 - $f_e = 1/T_e \geq 2B$

Reconstruction

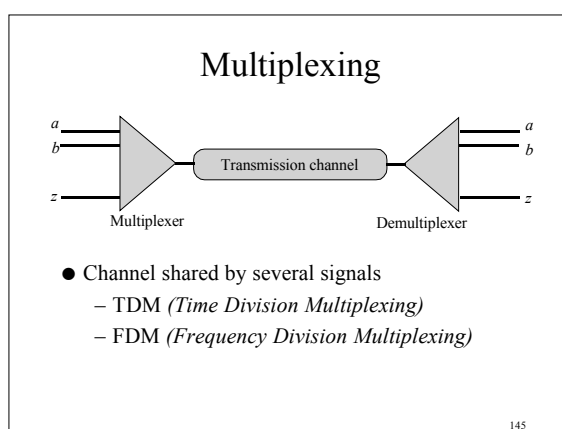

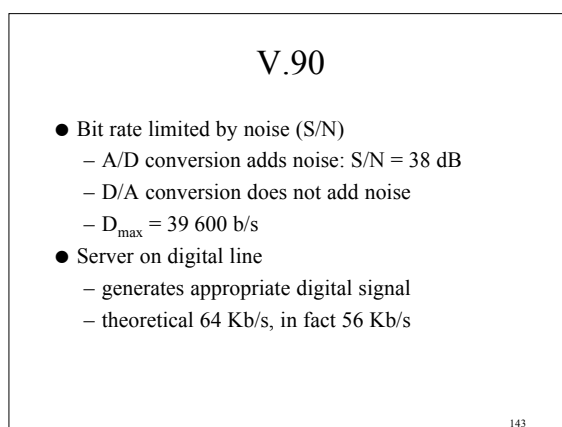

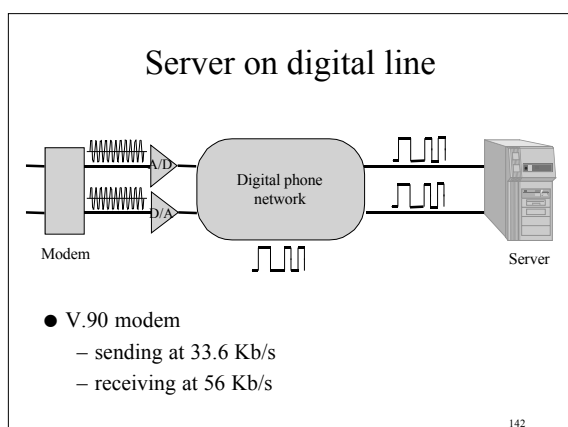

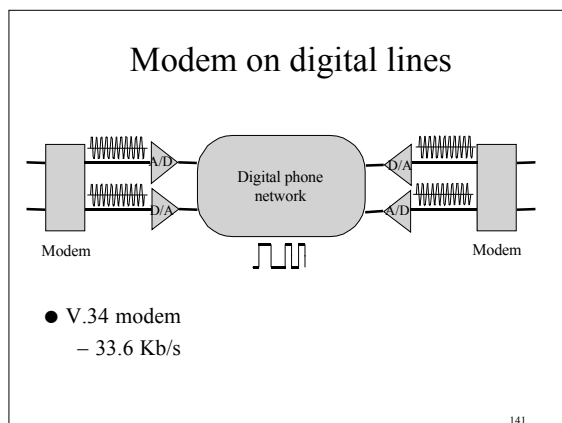

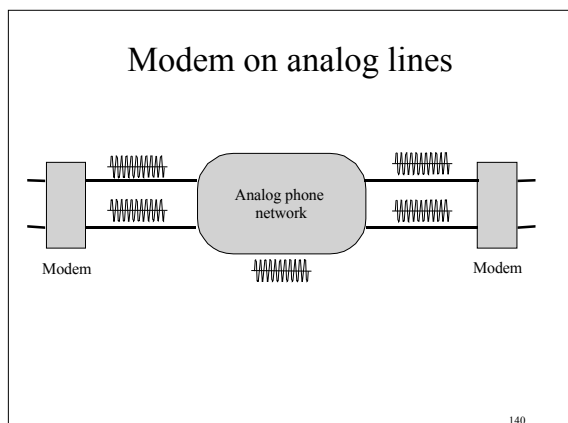

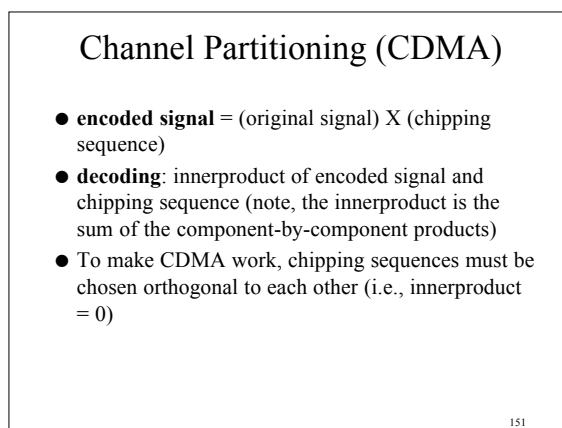

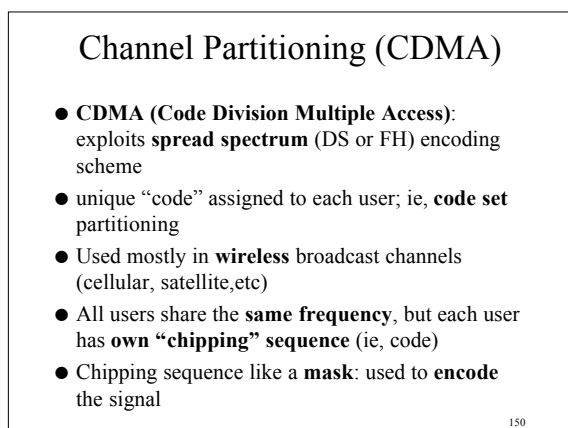

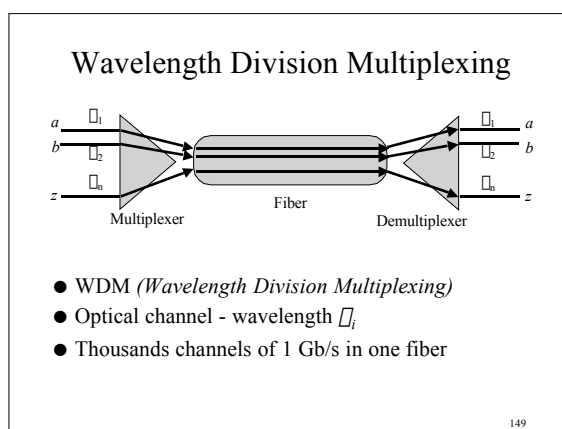

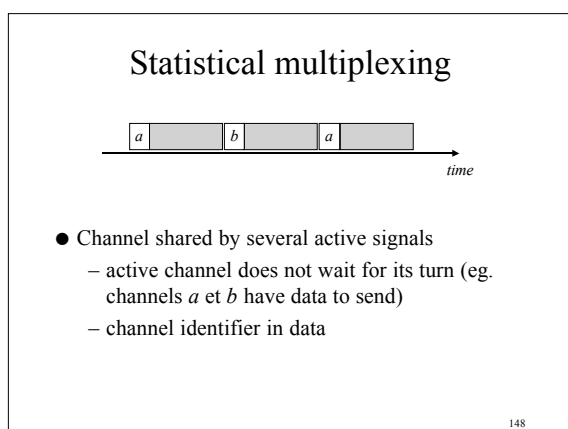

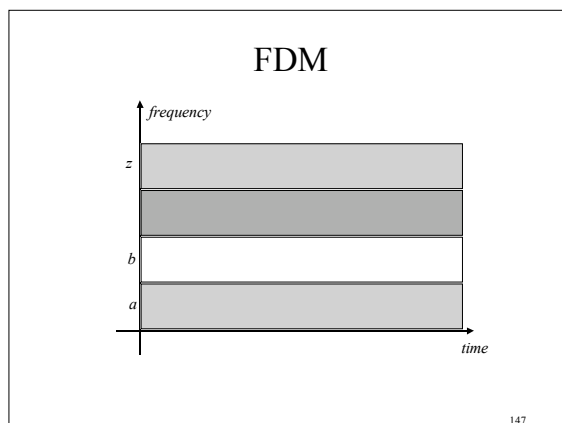

Coding and quantification

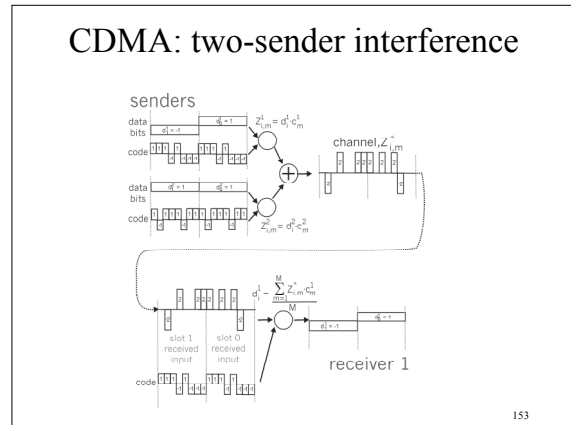

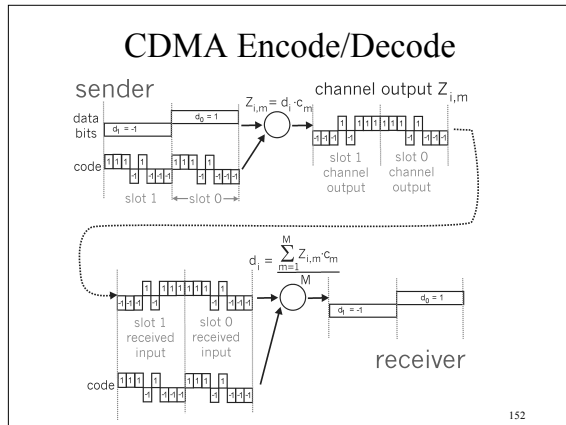

- Sample coded on N bits
 - ex. $N = 8, 0 \dots 255$
- Quantification error results in a noise measured in dB (S/N)
 - 1 bit increases S/N by 6 dB
 - 8 bits □ 48 dB
 - 16 bits □ 96 dB
 - ideal: 20 bits □ 120 dB (quality required by human ear)

Examples

- Phone
 - $B = \sim 4$ KHz
 - $f_e = 8$ KHz, $T_e = 125 \mu s$
 - sample coded on 8 bits
 - bit rate required: 8 bits □ 8 KHz = 64 Kb/s
 - GSM : 15.2 Kb/s, ADPCM : 32 Kb/s
- Hi-Fi (CD)
 - $B = \sim 20$ KHz
 - $f_e = 44.1$ KHz, professional 48 KHz
 - sample coded on 16 bits , professional 20 bits
 - bit rate required: 176 Kbyte/s

CDMA

CDMA Properties:

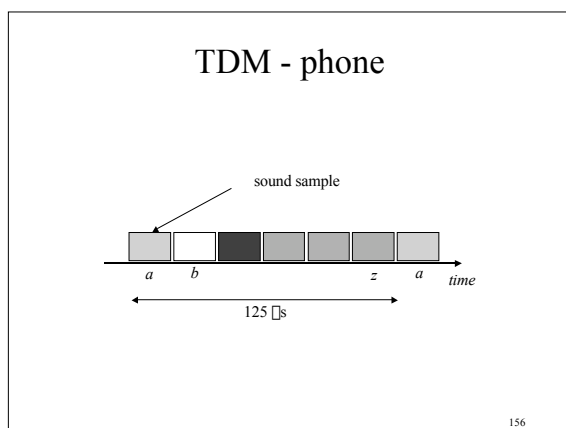

- protects users from interference and jamming (used in WW II)
- protects users from radio multipath fading
- allows multiple users to “coexist” and transmit simultaneously with minimal interference (if codes are “orthogonal”)

154

Examples

- Temporal multiplexing
 - EU hierarchy
 - » E1 : 30 □ 64 Kb/s □ 2 Mb/s
 - » E3 : 480 □ 64 Kb/s □ 34 Mb/s
 - US hierarchy
 - » T1 : 24 □ 64 Kb/s □ 1.5 Mb/s
 - » T3 : 672 □ 64 Kb/s □ 44 Mb/s

155

Examples

- TDM on fiber
 - SDH *Synchronous Digital Hierarchy*, SONET *Synchronous Optical Network*
 - » OC-1 : 51 Mb/s
 - » OC-3 : 155 Mb/s
 - » OC-12 : 622 Mb/s
 - » OC-48 : 2.4 Gb/s

157

Examples

- FDM
 - modems

158

Examples

- Hybrid multiplexing
 - GSM
 - » 124 channels of 270 Kb/s
 - » each channel divided into 8 time slots

159

Numéris

- Digital channel
 - B : 64 Kb/s (data)
 - D : 16 Kb/s (signaling; packets)
- Base access
 - 2B + D
- Primary access
 - 30B + D

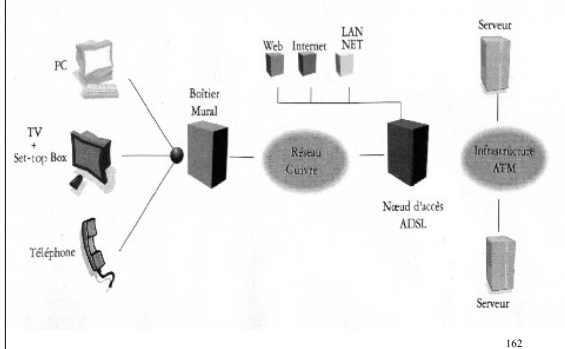

160

ADSL

- *Asymmetric Digital Subscriber Link*
- High speed residential access on twisted pair
 - Assymmetric bandwidth
 - 8 Mb/s downstream
 - 1 Mb/s upstream
 - Short distance between home and switch

161

Architecture

162

Frequency bands

- FDM
- 0 - 4 kHz: POTS, 94 - 106 kHz: upstream, 120 - 420 kHz: downstream
- high frequency ⇒ small distances

163

Modulation

- CAP Carrier-less Amplitude/Phase modulation
 - carrier frequency suppressed
- DMT Discrete Multi-Tone
 - several different sub-carrier frequencies

G.Lite, Universal ADSL

- Future standard
- Lower bit rate
 - downstream up to 1,5 Mbps
 - upstream up to 128 Kbps

HFC: hybrid fiber coax - cable modem

- Tree structure
 - » Head-End: CMTS (Cable Modem Termination System) connected to CM (Cable Modem) => Virtual LAN
 - » from 500 to 2000 modems per node - shared!

Modulation

- Different types
 - 64 QAM : 64-state Quadrature Amplitude Modulation
 - QPSK : Quadrature Phase Shift Keying
 - DQPSK : Differential Quadrature Phase Shift Keying
 - BPSK : Biphase Shift Keying

Downstream flow

- Received by CM
- Frequency: 65-850 MHz (EU)
- Bandwidth: 8 MHz (EU)
- Modulation: 64 QAM / 256 QAM
- Bit rate: 10 Mb/s
- All modems receives the flow

Upstream flow

- Sent by CM
- Frequency: 5-65 MHz (EU)
- Bandwidth: 2 MHz (EU)
- Modulation: QPSK / 16 QAM / DQPSK
- Bit rate: 768 Kbps

Facts to remember

- Complex relations between length, quality of the media, S/N, and performance (bit rate, error rate)
- Physical layer
 - hides signal transmission problems
 - provides interface for unreliable transmission of bits
- Future?
 - fiber for every stationnary equipment
 - radio for mobiles
